Orders

Sum of online_revenue and Sum of store_revenue by week_start_date

report_year	H1 Revenue	H1 YoY %
2024	62,30,875.39	
2025	77,19,260.96	0.24
2026	99,17,441.00	0.28
Total	2,38,67,577.35	

Revenue is growing fast (H1 +24% in 2025, +28% in 2026), and growth is shifting from more orders to higher basket value: 45% of H1 2026 growth came from AOV vs 31% a year earlier.

Revenue by week_of_year and report_year

report_year ● 2024 ● 2025 ● 2026

Avg Weekly Revenue by month_name and report_year

report_year ● 2024 ● 2025 ● 2026

June is the peak and October the trough (~3.3x apart). Most months grew 10–50% in 2025, but October grew only ~3.5%: the low season isn't growing.

Avg Weekly Revenue by month_name and promo_label

promo_label ● Non-promo week ● Promo week

AOV by month_name and promo_label

promo_label ● Non-promo week ● Promo week

Promo weeks earn +28% more overall, but only ~+11% vs non-promo weeks in the same month; the gap is mostly timing (promos sit on Memorial Day, Labor Day, Black Friday). AOV is lower in promo weeks in ~2/3 of months. October has no promo weeks at all: the weakest month gets no commercial events.

Media Spend by week_start_date and channel_family

channel_family Brand / Offline Owned / CRM Paid search Paid social

channel	2024	2025	2026	Total
Direct mail	1,33,033.00	1,65,811.00	1,28,457.00	4,27,301.00
Google PMax	1,28,994.10	47,832.12	16,771.82	1,93,598.04
Google Search	72,741.16	68,356.86	51,664.01	1,92,762.03
Meta Prospecting	94,107.76	50,300.72	39,505.78	1,83,914.26
Print	47,845.00	50,126.00	84,130.00	1,82,101.00
Google Shopping	15,970.14	66,250.00	73,006.98	1,55,227.12
Meta Retargeting	64,008.22	50,092.13	13,096.88	1,27,197.23
OOH	60,004.00	0.00	0.00	60,004.00
TikTok Prospecting	626.26	20,693.79	12,588.91	33,908.96
Microsoft Ads	9,480.59	16,803.08	4,182.08	30,465.75
Email	7,956.00	8,164.00	4,628.00	20,748.00
Total	6,36,311.58	5,51,770.40	4,31,927.05	16,20,009.03

Media is only 3–5% of revenue; direct mail is the largest line. Shopping scaled up, PMax and paid social were cut, and OOH stopped after 2024. Revenue grew ~20% in 2025 while spend fell ~13%. After removing seasonality, only Meta and Google Shopping still track online revenue (see notebook); these are correlations, not causal effects.

KEY INSIGHTS

1. **Growth is shifting to basket value:** H1 revenue +24% (2025) and +28% (2026); 45% of 2026 growth came from higher AOV vs 31% in 2025.
2. **Strong, repeatable seasonality:** June peaks at ~3.3x October. Most months grew 10–50% in 2025, but October grew only ~3.5%.
3. **Promotions look better than they are:** +28% overall, but only ~+11% vs non-promo weeks in the same month, with lower AOV in ~2/3 of months.
4. **Lean, more efficient marketing:** media is 3–5% of revenue. Revenue grew ~20% in 2025 while spend fell ~13% as budget moved from PMax and paid social into Google Shopping.
5. **After removing seasonality, only Meta and Google Shopping still track online revenue; direct mail's store effect is weak and lagged.**

RECOMMENDATIONS

1. **Review promotions in already-strong weeks (June, holiday).** Trial shorter or fewer events and track AOV and full-price sell-through, not just revenue.
2. **Grow the autumn trough.** October has no promotions or launches and isn't growing: test a capsule launch or a direct mail drop there, with a holdout group.
3. **Manage price and mix as a core growth lever:** report AOV and full-price mix by channel as headline KPIs.
4. **Measure before moving budget:**
 - Direct mail holdout on the customer file (the largest spend line)
 - Google Shopping geo test (regions on vs off)
 - Meta prospecting conversion-lift study
 - Then a marketing mix model calibrated on these test results

DATA CHECKS: 130 consecutive weeks (31 Dec 2023 – 21 Jun 2026), no gaps or missing values; revenue and orders reconcile exactly with online + store; 56 promo and 33 launch weeks match the brief.

ASSUMPTIONS: the week of 31 Dec 2023 counts as 2024 week 1; year-on-year compares weeks 1–25 because 2026 is a half year; months are compared on average weekly revenue (July looks biggest on totals only because it has 5 weeks); email spend is a flat fee, not a marketing driver.

LIMITATIONS: observational data (promotions, launches and spend are chosen by the business, so no causal claims); 12 correlated channels over only 130 weeks; no impressions, clicks, traffic, price or inventory data; OOH, print and direct mail act over several weeks but are booked in one.
